

Análise de Redes Sociais — Bluesky

Data: 19/06/2026 18:17
Termo de busca: resident evil
Posts coletados: 100
Usuários na amostra: 50
Relações de follow: 8

1. Metodologia

Esta análise segue a metodologia de análise de redes sociais em quatro etapas: **(1) Coleta de dados** via API do Bluesky (AT Protocol), buscando posts por termo e relações de follow entre autores; **(2) Construção da rede**, onde nós representam usuários e arestas representam follows e co-participação temática; **(3) Detecção de comunidades** pelo algoritmo de Louvain, que identifica grupos densamente conectados; **(4) Análise complementar** com text mining por comunidade e recomendação de usuários/posts similares dentro do mesmo grupo.

6. Considerações Finais

A detecção de comunidades revelou grupos de usuários com padrões distintos de conexão e vocabulário. A integração entre análise de rede e text mining permite comparar o comportamento discursivo de cada grupo. O sistema de recomendação demonstra como informações de comunidade podem direcionar sugestões de conteúdo e conexões a usuários com interesses similares.
